

How Is the Shop Performing?

Online Shop Performance | January 2024 – June 2026

Revenue was broadly stable through 2024–2025 but fell sharply from February 2026.

Electronics is the largest revenue category, while Accessories sells the most units.

Regular customers and Tehran are the largest revenue contributors.

Data preparation & cleaning

Four source files were joined to create the analysis dataset.

Missing Discount → treated as 0% so revenue could be calculated consistently.

Missing PaymentMethod → retained as “Unknown”; not silently dropped.

Zero/negative quantities → excluded from revenue calculations.

City variants such as Mashad/Mashhad and Tehran/tehran → standardised.

30 orders had CustomerIDs not present in the customer table; these were excluded from customer/city/segment analysis.

Recognised revenue = positive-quantity, Completed orders with Paid payment status.

Revenue performance

Monthly recognised revenue shows a clear break in performance during 2026.

So what: the 2026 decline should be investigated before further growth spending.

Products & categories

Revenue and volume tell different stories.

So what: Electronics leads revenue (R1.51M), while Accessories leads unit volume (35,031 units).

Customers & geography

A small number of markets and the Regular segment contribute a large share of revenue.

So what: Tehran contributes about 27.9% of analysed customer revenue, while Regular customers are the largest segment by revenue.

Operational performance

Cancellations, returns and payment failures create avoidable revenue leakage.

Payment failure rate by method

Payment failure rates are broadly similar across the main payment methods.

There is no single payment method that stands out as the dominant failure source.

The cancellation/return rate warrants an operational root-cause review.

So what: reducing failed and reversed transactions can protect realised revenue without relying only on new customer acquisition.

Recommendations & management actions

Three actions directly linked to the analysis.

1

Investigate the 2026 revenue decline

Revenue fell 40.2% from January to February 2026 and stayed below prior levels. Review traffic, stock availability, pricing, marketing and operational changes around the same time.

2

Protect high-value products and grow repeat customers

Prioritise high-revenue Electronics products and use retention activity to convert New customers into Regular customers, the largest revenue segment.

3

Review discount and return strategy

Higher discount bands are associated with lower average order revenue, while cancellations and returns together affect about 8% of valid orders. Test targeted discounts and return policies.
